AI Equity Research Copilot

AI-powered equity research for small & mid-cap stocks that Wall Street ignores

Prathamesh Lande

MSBA · Business Analytics

Time Series Forecasting

GenAI Chatbot

Stock Analytics

AI Equity Research Copilot

A conversational AI platform combining time series forecasting + GenAI chatbot — focused on small & mid-cap stocks where analyst coverage is scarce and retail investors have no research tools.

Predict

Time series models forecast price trends and volatility signals

Converse

GenAI chatbot answers natural-language investment questions

Synthesize

Aggregates earnings calls, analyst reports & market news

Where This Lives

Primary Industry

Financial Technology (FinTech)

Sub-Sector

Retail Investment & Trading Platforms

Target Company Type

Brokerage Apps, Robo-Advisor Startups, WealthTech

Comparable Companies

→ Robinhood

→ E*TRADE

→ Webull

→ Motley Fool AI

→ Bloomberg Terminal

→ MarketBeat

03 / USER PERSONA & STAKEHOLDERS

PRIMARY USER

Retail Investor

Self-directed traders investing in small & mid-cap stocks who have zero analyst reports or AI tools to guide them

 ~160M retail investors in the US

SECONDARY USER

Financial Advisor

Independent RIAs and wealth managers seeking AI-assisted research to serve more clients efficiently

 ~330K registered advisors (US)

STAKEHOLDER

Platform / Brokerage

FinTech companies integrating the copilot as a premium feature to increase user retention and AUM

 ~50+ brokerage/trading platforms

STAKEHOLDER

Compliance Team

Ensures AI-generated investment insights include appropriate risk disclosures and regulatory guardrails

 Internal team (5–20 per firm)

 PAIN POINTS

~60% of publicly listed US companies have fewer than 2 analyst reports per year — retail investors fly blind

Manually reading SEC filings and earnings transcripts for small-caps is time-consuming with no shortcuts

Emotional, reactive decision-making on thinly covered stocks leads to poorly timed entries and exits

No platform combines price forecasting + natural language Q&A for the small & mid-cap segment specifically

 BUSINESS BENEFITS

AI fills the analyst coverage gap — bringing institutional-grade research to ignored small & mid-cap stocks

GenAI chatbot summarizes 10-K filings and earnings calls in seconds, saving hours of manual reading

Quantitative forecasts with uncertainty ranges give objective signals to counter emotional bias

First-mover advantage in an underserved niche — not competing with Bloomberg, building where it isn't

05 / KEY BUSINESS QUESTIONS & DECISIONS

1

Forecasting

What will this small/mid-cap stock's price trend look like over the next 30–90 days?

2

Decision Support

Is there a buy/hold/sell signal for stocks with little to no analyst coverage?

3

GenAI Synthesis

What does the company's 10-K or latest earnings call actually say — in plain English?

4

Risk Analytics

How volatile is this stock vs. its small-cap sector peers, and what's the downside risk?

5

Feature Analysis

Which macro or fundamental indicators most drive this stock's price movement?

6

NLP / Sentiment

Has market sentiment around this under-covered stock shifted after recent filings or news?

Where the data comes from

Price & Market Data

- Yahoo Finance API (yfinance)
- Alpha Vantage (free tier)
- Quandl / Nasdaq Data Link

Fundamental Data

- SEC EDGAR (10-K, 10-Q filings)
- Macrotrends.net
- Simfin (free fundamentals)

News & Sentiment

- NewsAPI.org
- Finnhub News
- Reddit (WSB sentiment via PRAW)

Macro Indicators

- FRED (Federal Reserve Economic Data)
- World Bank Open Data
- BLS (CPI, Jobs Reports)

AI Opportunities & USP

- Unique focus: ~60% of listed US companies have <2 analyst reports/year — no major platform addresses this gap
- Chatbot is grounded in the forecast model — cites signals & uncertainty ranges, not generic responses
- Time series forecasting (ARIMA/Prophet/LSTM) + LLM summarization of SEC filings = differentiated stack

Risks & Limitations

- Model accuracy: stock prices are inherently noisy — forecasts are probabilistic, not guarantees
- Regulatory risk: AI-generated financial advice must include proper disclaimers
- Data quality: free APIs may have delays, rate limits, or gaps

Assumptions

- Platform used for educational/research purposes, not as licensed financial advice
- Users understand that model outputs are decision-support tools, not buy/sell signals
- Free-tier data APIs (Yahoo Finance, FRED) sufficient for MVP scope

The Opportunity

AI-powered equity research for everyone.

This copilot brings institutional-level forecasting and research synthesis to everyday investors — combining the power of time series AI and GenAI in one conversational interface.
